PROFILE SUMMARY

Software Engineer with 7+ years of expertise in designing high-performance backend systems, microservices, and large-scale digital platforms serving millions of users across telecom and healthcare sectors. Proven track record in optimizing database performance, improving system reliability, and leading engineering teams to deliver mission-critical enterprise applications.

TECHNICAL EXPERTISE

Backend Engineering: Node.js, Go, PHP, TypeScript, REST API, Micro-services

Frontend Development: React, Angular, HTML, CSS

Databases & Caching: MySQL, PostgreSQL, MongoDB, SQL Server, Redis

Cloud & Infrastructure: AWS (EKS, EC2, ECR), Docker, Kubernetes, CI/CD

Testing & Observability: Jest, Mocha, SonarQube, Kibana, Splunk

EXPERIENCE

Software Engineer - PT. Bithealth

Jul 2025 - Apr 2026 | Tangerang, Indonesia

- Optimized inefficient database queries and resolved complex N+1 query problems, successfully improving API response time by up to 70%.
- Resolved critical production issues and performed deep root-cause analysis, significantly improving system stability and reducing recurring operational incidents.
- Refactored legacy codebases with clean architecture principles to enhance maintainability.
- Improve system observability by enhancing application logging and monitoring.
- Implemented backend and frontend enhancements, bug fixes, and critical feature multiple hospital workflows

Project: Siloam Hospitals (frontoffice, kairos, payment, queue management, opdadmin)

Tech Stack: Angular, React, Express.js, Typescript, .NET, SQL Server (MSSQL), PostgreSQL, Kibana

Web Development Team Lead - PT. Phincon

Apr 2023 - Apr 2025 | Jakarta, Indonesia

- Led a cross-functional team of 10 engineers in designing, developing, and delivering high-performance API services and scalable features across 30+ Telkomsel applications.
- Achieved 100% SLA compliance during rigorous Non-Functional Testing (NFT), ensuring high availability and stability for millions of active users.
- Streamlined engineering workflows by implementing strict code review standards, technical documentation practices, and agile sprint planning using Jira to boost team productivity.
- Managed sprint capacity, technical debt, and backlog prioritization, aligning engineering milestones with Product Owners, QA, and DevOps teams for smooth production releases.

Project: MyTelkomsel Web

Tech Stack: Hapi.js, Express.js, React, MySQL, Redis, AWS, Docker, Jenkins, Jira

Fullstack Developer - PT. Phincon

Nov 2021 - Jul 2025 | Jakarta, Indonesia

- Developed and maintained scalable backend API services and frontend modules for core enterprise systems including MyTelkomsel Web, App, and Lite platforms.
- Collaborated with QA and DevOps teams across SIT, UAT, regression, functional, and non-functional testing.
- Built automated unit tests achieving 80%+ coverage to improve code quality and system reliability.
- Optimized backend services and database queries (MySQL, Redis) to significantly reduce latency, achieving sub-second API response times under high traffic loads.

Project: MyTelkomsel Web, MyTelkomsel Apps, MyTelkomsel Lite

Tech Stack: Hapi.js, Express.js, React, MySQL, Redis, AWS, Docker, Jenkins, Jira

IT Developer - PT. eGoGo Hub Indonesia

Oct 2018 - Oct 2021 | Jakarta, Indonesia

- Architected and developed a live multi-marketplace management platform, successfully synchronizing products, inventory, and orders across 7 major e-commerce marketplaces in real-time.
- Engineered and delivered 2 custom enterprise resource planning (ERP) systems and 4 corporate web platforms from scratch for diverse external clients, ensuring strict adherence to business requirements and deadlines.
- Engineered and delivered 3 custom enterprise resource planning (ERP) systems and 5 corporate web platforms from scratch for diverse external clients, ensuring strict adherence to business requirements and deadlines.
- Delivered client-facing e-commerce and logistics solutions (such as Go-Commerce Builder and Live Integration Dashboard) that streamlined internal workflows and operational efficiency.
- Troubleshoot and resolved critical production issues, minimizing downtime and maintaining data integrity across integrated client systems.

Project: eGoGo Web & ERP, Dekkson ERP & Loyalty, Hattan Intl, Go-Commerce Builder, Live Integration Dashboard (LID)

Tech Stack : PHP Native, Express.js, React, Go, Dolibarr, MySQL

KEY PROJECT

MyTelkomsel Digital World

Contributed to the development of Telkomsel Digital World, a large-scale digital ecosystem consisting of three main platforms: MyTelkomsel Web, MyTelkomsel App, and MyTelkomsel Lite, serving millions of Telkomsel users across Indonesia.

Siloam Mobility

Worked on the development and maintenance of Siloam Mobility, a digital healthcare platform. Focused on resolving production issues, optimizing backend API performance, and refactoring legacy code to improve system stability while implementing backend and frontend improvements based on user requirements.

EDUCATION

Software Engineering Faculty of Engineering

Universitas Amikom Yogyakarta (3.64/4.00)

2015 - 2019

Sleman - Indonesia

CERTIFICATION

Cloud Practitioner Essentials (Belajar Dasar AWS Cloud)

Dicoding Indonesia - Januari 2025
